

FLIR **LEPTON**[®]

Radiometric Longwave Infrared (LWIR) Camera Module

The FLIR Lepton[®] is a radiometric-capable LWIR camera solution that is smaller than a dime, can fit inside a smartphone, and is ten times less expensive than a traditional IR camera. Using a focal plane array of 80 × 60 active pixels, Lepton easily integrates into native mobile-devices and other electronics as an IR sensor or thermal imager. The radiometric Lepton captures accurate, calibrated, non-contact temperature data in every pixel of each image for even greater utility in commercial applications. Non-radiometric versions are also available.

ENHANCED IR SENSOR

Greater sensitivity than common thermopile arrays

- Thermal sensitivity <50 mK
- Temperature stabilized output for radiometric processing
- Low operating power – 150 mW typical, 650 mW during shutter event
- Low power standby mode

MICRO THERMAL IMAGER

Uncooled thermal imaging for small electronics

- Integrated digital thermal image processing
- Multiple lens options: 50° / 25° FOV
- Shutterless option available
- Fast time to image (<0.5 seconds)

EASE OF INTEGRATION

Simplifies development and manufacturing of thermal-enabled devices

- Package as small as 8.5 x 8.5 x 5.6 mm (non-radiometric)
- Export Compliant (<9Hz)
- SPI video interfaces
- Uses standard cell phone-compatible power supplies
- Two-wire serial control interface
- 32-pin socket interface to connector
